

**In the Claims:**

Claims 1-9 (Cancelled)

10. (Original) A method of generating data maintenance tasks within an enterprise information system, comprising the steps of:

- filing a source object and event to the system;
- determining whether said event is a custom event or a system event;
- adding all system events to an event queue;
- determining for each of said custom events whether a corresponding custom event ruleset is true;
- adding each of said custom events where said corresponding custom event ruleset is true to said event queue;
- determining for each of said custom or system events in said event queue whether a task definition corresponding to each of said custom or system events exists;
- determining for each task definition corresponding to each of said custom or system events whether a task definition ruleset is true; and
- generating a task for each of said custom or system events having a task definition ruleset that is true.

11. (Original) A method according to claim 10, further comprising the step of adding said task to an enterprise task list.

12. (Original) A method according to claim 11, further comprising the step of determining whether said task is a duplicate task.

13. (Original) A method according to claim 10, wherein at least one of said tasks generated is worked by the system.

14. (Original) A method according to claim 10, wherein at least one of said tasks generated is presented to be worked by a user.

15. (Original) A method according to claim 10, wherein each of said tasks generated includes a predetermined set of instructions for working each of said tasks.

Claims 16-38 (Cancelled)

39. (Previously Presented) A computer readable medium on which is contained a set of computer readable code for generating data maintenance tasks within an enterprise information system, the computer readable code comprising instructions that, when executed by a processor of a computer, perform the steps of:

- filing a source object and event to the system;
- determining whether said event is a custom event or a system event;
- adding all system events to an event queue;
- determining for each of said custom events whether a corresponding custom event ruleset is true;
- adding each of said custom events where said corresponding custom event ruleset is true to said even queue;
- determining for each of said custom or system events in said event queue whether a task definition corresponding to each of said custom or system events exists;
- determining for each task definition corresponding to each of said custom or system events whether a task definition ruleset is true; and
- generating a task for each of said custom or system events having a task definition ruleset that is true.

40. (Previously Presented) A computer readable medium according to claim 39, further comprising the step of adding said task to an enterprise task list.

41. (Previously Presented) A computer readable medium according to claim 40, further comprising the step of determining whether said task is a duplicate task.

42. (Previously Presented) A computer readable medium according to claim 40, wherein at least one of said tasks generated is worked by the system.

43. (Previously Presented mended) A computer readable medium according to claim 40, wherein at least one of said tasks generated is worked by a user.

44. (Previously Presented) A computer readable medium according to claim 40, wherein each of said tasks generated includes a predetermined set of instructions for working each of said tasks.

Claims 45-49 (Cancelled)
